

# Three example datasets

- **West Nile Virus NS3 protein**

- An interesting case study of how positive selection detection methods lead to testable hypotheses for function discovery
- Brault et al 2007, *A single positively selected West Nile viral mutation confers increased virogenesis in American crows*

- **HIV-1 transmission pair**

- Partial *env* sequences from two epidemiologically linked individuals
- An example of multiple selective environments (source, recipient, transmission)

- **SARS-CoV-2 Spike**

- Full length spike sequences chosen to represent viral diversity (circa mid 2021)
- Good example for analyzing selection in population samples with many “dead-end” intra-host variants

**HIV-1 *env***

**WN NS3**
