MEME results

- West Nile Virus NS3 protein
 - Four sites (incl. 249, previously reported) with significant evidence of episodic (or pervasive) diversifying selection.
- HIV-1 transmission pair
 - Nine sites with significant evidence of episodic (or pervasive) diversifying selection. HIV-1 transmission pair

- SARS-CoV-2 spike (all)
 - Six sites with significant evidence of **episodic** (or pervasive) diversifying selection.
- SARS-CoV-2 spike (internal)
 - Six sites with significant evidence of **episodic** (or pervasive) diversifying selection.

Questions about the previous material?

We covered the MEME method:

which detects episodes of selection and is used as a more sensitive method for estimating diversifying selection.
